

3-MODE 150mA LDO REGULATOR

NO.EA-234-090525

OUTLINE

The RP201x Series consist of CMOS-based voltage regulator ICs with high output voltage accuracy, low dropout voltage and low supply current. These ICs perform with the chip enable function and realize a standby mode with ultra low supply current. To prevent the destruction by over current, the current limit circuit is included. The RP201x Series have 3-mode. One is standby mode with CE pin. Other two modes are realized with ECO Function. Fast Response Mode (Fast Mode) and Fast and Low Power auto-change Mode (Auto ECO Mode) are alternative with Auto Eco pin (AE pin). Supply current of IC itself at light load is automatically reduced at Auto ECO Mode compared with Fast Mode. The output voltage is maintained between Fast Mode and Auto ECO Mode.

Without AE pin type is also available. It is an LDO regulator with Auto ECO mode. (RP201Z in WLCSP.)

Since the packages for these ICs are SOT-23-5, SC-88A, thin DFN(PLP)1212-6, and WLCSP-4-P5, high density mounting of the ICs on boards is possible. RP201Q (SC-88A), RP201K (DFN(PLP)1212-6) and RP201N (SOT-23-5) has AE pin, then if the AE pin is "H", Fast Mode is available. If the AE pin is set at "L" level, Auto ECO Mode operation is available.

FEATURES

- Supply Current (Low power Mode) Typ. 1.0 μ A ($V_{OUT} \leq 1.85V$)
- Supply Current (Fast Mode)..... Typ. 55 μ A
- Supply Current (Standby Mode)..... Typ. 0.1 μ A
- Ripple Rejection Typ. 70dB ($f=1kHz$)
- Input Voltage Range 1.4V to 5.25V
- Output Voltage Range..... 0.8V to 4.0V
- Output Voltage Accuracy..... $\pm 1.0\%$ ($V_{OUT} > 2.0V$, $T_{opt}=25^{\circ}C$)
- Temperature-Drift Coefficient of Output Voltage Typ. $\pm 50ppm/^{\circ}C$
- Dropout Voltage Typ. 0.12V ($I_{OUT}=150mA$, $V_{OUT}=2.8V$)
- Line Regulation Typ. 0.02%/V
- Packages DFN(PLP)1212-6, SOT-23-5, SC-88A, WLCSP-4-P5
- Built-in Fold Back Protection Circuit Typ. 50mA (Current at short mode)
- Ceramic capacitors are recommended 1.0 μ F or more

APPLICATIONS

- Power source for portable communication equipment.
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for battery-powered equipment.

SELECTION GUIDE

The output voltage, auto discharge function^{*}, and the taping type for the ICs can be selected at the user's request.

The selection can be made with designating the part number as shown below;

RP201xxxxx-xx-x ← Part Number
 ↑ ↑ ↑ ↑ ↑ ↑
 a b a'c d e

Code	Contents
a, a'	Designation of Package Type: WLCSP-4-P5 : RP201Zxx1x-xx-x DFN(PLP)1212-6 : RP201Kxx1x-xx-x SC-88A : RP201Qxx2x-xx-x SOT-23-5 : RP201Nxx1x-xx-x
b	Setting Output Voltage (V _{OUT}): Stepwise setting with a step of 0.1V in the range of 0.8V to 4.0V is possible. Exception: 2.85V=RP201x28xx5-xx-x
c	Designation of Mask Option B : active high, without auto discharge function [*] at OFF state. D : active high, with auto discharge function [*] at OFF state.
d	Designation of Taping Type: Ex. TR (Refer to Taping Specifications; TR type is the standard direction.)
e	Designation of composition of pin plating: -F : Lead free solder plating (SC-88A, SOT-23-5, WLCSP-4-P5) None : Au plating (DFN(PLP)1212-6)

*) When the mode is into standby with CE signal, auto discharge transistor turns on, and it makes the turn-off speed faster than normal type.

All of units are tested and specified under load conditions such that T_j≈T_{opt}=25°C except for Ripple Rejection, Output Voltage Temperature Coefficient.

- *1) The value of supply current is excluding the Pull-down constant current of CE Pin and AE Pin.
- *2) The maximum Input Voltage of the ELECTRICAL CHARACTERISTICS is 5.25V. In case of exceeding this specification, the IC must be operated on condition that the Input Voltage is up to 5.5V and the total operating time is within 500hrs.
- *3) Applied to RP201K/N/Q
- *4) V_{IN} ≥ 1.4V condition is dominant against this specification.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

TYPICAL APPLICATION

(External Components)

C1, C2 : Ceramic Capacitor 1.0 μ F MURATA: GRM155B31A105KE15

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor C2 with 1.0 μ F or more and good ESR (Equivalent Series Resistance).

(Note: If additional ceramic capacitors are connected with parallel to the output pin with an output capacitor for phase compensation, the operation might be unstable. Because of this, test these ICs with as same external components as ones to be used on the PCB.)

PCB Layout

Make V_{DD} and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 1.0 μ F or more between V_{DD} and GND pin, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

Impedance of Input Pin (CE Pin and AE Pin)

In those ICs, there is a pull-down constant current in the CE Pin and the AE Pin. However, if those pins are floating and wired long that produce the noise environment, it might miss-operation of ICs. For this purpose, please make sure enough evaluation of ICs.
