

Ricoh Smart Configurator (RSC)

RICOH Smart Configurator tool can automate complex configuration tasks performed before deployment.

RICOH Smart Configurator is a Windows-based application designed for configuring Ricoh MFPs and printers. With its clean and intuitive interface, both novice and advanced users can easily access and modify device functions for proper configuration.

Warehouse configuration often involves a tedious task: replicating settings and performing firmware updates across multiple devices. The batch configuration feature provides an efficient, network-based environment to streamline this process.
